## Microsoft's Gift for Photographers

Panoramic photography is everywhere these days. The new popularity of panoramas is thanks to phone cameras and newer digital cameras automating a once difficult process. You set your camera on panorama mode and pan across a whole scene. The device takes multiple photos as you move your camera and then stitches all these photos into a single gigantic image.

In the good old days photographers had to manually (or digitally) piece together multiple photos. Where two photographs joined a lot of careful patching was required.

However you don't need an iphone X to play with panoramas. Any old digital camera will do. Just take multiple photos of a single scene, moving the angle slightly between each photo. And now for the trick... intelligent software will take care of the rest. Load your photos into a panorama stitching program and the software will fit your photographs together, and make a very good attempt at patching up joins and gaps.

Microsoft Research now have a simple yet advanced Windows panoramic image stitcher program available for free: www.microsoft.com/en-us/research/product/computational

-photography-applications/image-composite-editor/

If that web address looks too long, type this phrase into your google search box: microsoft image composite editor

Panorama techniques are not just for creating looooooong 360 degree images. Use panoramic stitching to increase the field of view and the resolution of any scene you want to capture. Create a grid pattern of nine (or more) photos pointing the camera in slightly different direction each time.

You will soon learn a few tricks like:

- Overlap your images and take more than you need
- Avoid moving subjects (or make use of them if you want really weird results!)
- Try not to move the camera too much as you point it in different directions (or use a tripod)

The resulting images will likely be so large your computer will slow down to a crawl as you view them. Perfect! This is the result you are looking for. You now have very large and detailed images (we can print them for you at NCRC).

Imagine the 1970's tropical beach scene on your loungeroom wall... except now you can get out your magnifying glass and see every grain of sand.

## Live Music Screening in Northcliffe! Great company, a big screen and big sound system.

Northcliffe CRC **CHRISTMAS CLOSING** 

CENTRELINK customers please note!

We are closed from Christmas to New Year.

> Last day open: 22 December

Reopening: 2 January.

**Public Holidays:** 25th 26th Dec, 1 Jan

Additional Closed Days: 27th, 28th & 29th Dec

Monday, Tuesday, Wednesday 10 am to 5 pm ● Thursday 10 am to 6 pm ● Friday 9 am to 6 pm

Tel: 9776 7330 Fax: 9776 7338 **PO Box 133** Northcliffe 6262 www.northcliffe.org.au ncrc@northcliffe.org.au

We are a not-for-profit organisation supported by the Northcliffe Community and DPIRD: GOVERNMENT WESTERN AUST
